

During the month of April 2016, Phalanx Secure Solutions performed multiple and extensive penetration tests against the law.cosmolex.com ("CosmoLex Application") and the supporting network infrastructure.

The Phalanx Secure Solutions assessment addressed the following:

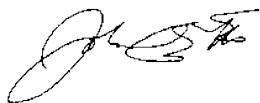

- Assessed the network infrastructure for possible exploitable vulnerabilities that could allow an attacker control of the CosmoLex Application environment and customer data
- Assessed the CosmoLex Application against exploitable vulnerabilities that could compromise CosmoLex Application users or the overall application.
- Evaluated the CosmoLex Application against the OWASP Top Ten Vulnerabilities.

Phalanx Secure Solutions conducted an external penetration test of the network infrastructure and multiple extensive penetration tests against the CosmoLex Application.

Phalanx Secure Solutions used leading automated web vulnerability assessment tools and manual tests to validate security.

Phalanx Secure Solutions found no exploitable vulnerabilities in either the CosmoLex Application or the network infrastructure that could compromise customer data.

Phalanx Secure Solutions has determined that the CosmoLex Application and the network infrastructure provides extensive, robust, and ongoing security for users of the CosmoLex Application.
